Contributions should, preferably, be sent to a member of the Advisory Editorial Board (addresses are given in the first issue of each volume) who is familiar with the research reported, or to one of the Editors:

A.D. BUCKINGHAM
D.A. KING
Editor of Chemical Physics Letters
University Chemical Laboratory
Lensfield Road
Cambridge CB2 1EW, UK
FAX 44-1223-336362

A.H. ZEWAIL
Editor of Chemical Physics Letters
A.A. Noyes Laboratory of Chemical Physics
California Institute of Technology
Mail Code 127-72
Pasadena, CA 91125, USA
FAX 1-626-4050454

After acceptance of the paper for publication, all further correspondence should be sent to the publishers (Ms. S.A. Hallink, Issue Management (Chemistry), Elsevier Science B.V., P.O. Box 2759, 1000 CT Amsterdam, The Netherlands; telephone 31-20-4852664, FAX 31-20-4852775, telex 10704 espom nl; electronic mail X400: C=NL; A=400NET; P=SURF; O=ELSEVIER; S=HALLINK, I=S or RFC822: S. HALLINK@ELSEVIER.NL).

Publication information: Chemical Physics Letters (ISSN 0009-2614). For 1998, volumes 281–297 are scheduled for publication. Subscription prices are available upon request from the publisher. Subscriptions are accepted on a prepaid basis only and are entered on a calendar year basis. Issues are sent by surface mail except to the following countries where Air delivery via SAL is ensured: Argentina, Australia, Brazil, Canada, Hong Kong, India, Israel, Japan, Malaysia, Mexico, New Zealand, Pakistan, PR China, Singapore, South Africa, South Korea, Taiwan, Thailand, USA. For all other countries airmail rates are available upon request. Claims for missing issues must be made within six months of our publication (mailing) date.

CHEMICAL PHYSICS LETTERS

KEY GUIDELINES FOR AUTHORS

- All manuscripts require an abstract which should be informative and not exceed 100 words.
- The total number of references should not exceed 35; multiple references (containing more than one paper) should be avoided.
- The number of figures should not exceed 5 normal-sized figures.
- The manuscript should normally not exceed the equivalent of 2500 words including text, tables and figure captions (approximately 12 double-spaced pages).
- Authors are encouraged to submit a disk with an electronic file exactly matching the hard copy of their manuscript.
- Manuscripts should be sent to one of the editors or preferably to a member of the Advisory Editorial Board who is familiar with the research field. When submitting to an editor, authors are urged to suggest the names of three appropriate referees.

The complete Instructions to Authors are on the last pages of each volume.

This journal and the individual contributions contained in it are protected by the copyright of Elsevier Science B.V., and the following terms and conditions apply to their use:

Photocopying
Single photocopies of single articles may be made for personal use as allowed by national copyright laws. Permission of the Publisher and payment of a fee is required for all other photocopying, including multiple or systematic copying, copying for advertising or promotional purposes, resale, and all forms of document delivery. Special rates are available for educational institutions that wish to make photocopies for non-profit educational classroom use.
In the USA, users may clear permissions and make payment through the Copyright Clearance Center Inc., 222 Rosewood Drive, Danvers, MA 01923, USA; Tel. (508)7508400; Fax (508)7504744. In the UK, users may clear permissions and make payment through the Copyright Licensing Agency Rapid Clearance Service (CLARCS), 90 Tottenham Court Road, London W1P 0LP, UK. In other countries where a local copyright clearance centre exists, please contact it for information on required permissions and payments.

Derivative Works
Subscribers may reproduce tables of contents or prepare lists of articles including abstracts for internal circulation within their institutions. Permission of the Publisher is required for resale or distribution outside the institution.
Permission of the Publisher is required for all other derivative works, including compilations and translations.

Electronic Storage
Permission of the Publisher is required to store electronically any material contained in this journal, including any article or part of an article. Contact the Publisher at the address indicated.

Except as outlined above, no part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without prior written permission of the Publisher.

Disclaimer
No responsibility is assumed by the Publisher for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions or ideas contained in the material herein.

Although all advertising material is expected to conform to ethical (medical) standards, inclusion in this publication does not constitute a guarantee or endorsement of the quality or value of such product or of the claims made of it by its manufacturer.

"No volume of PROGRESS IN OPTICS needs a long review:.....just make sure your librarian has a standing order." - Applied Optics

Progress in Optics Volume XXXVII

Volume edited by **E. Wolf**

Volume XXXVII in this renowned series presents six articles describing theoretical and experimental research of current interest in optics.
The first article is a review of some of the important applications of the Wigner distribution function in optics and optoelectronics. This is useful in the characterization of optical systems and beams, in the coupling between light sources and waveguides, and in nonlinear and ultrafast optics. Although the article focuses on the theoretical aspects, numerical simulations and experiments are also discussed.
The second article examines the mathematical foundations and the applicability of Kramers-Kronig relations to data inversion in linear and nonlinear optical spectroscopy. The subject of phase retrieval by use of the maximum entropy model is discussed in connection with reflection spectroscopy and nonlinear optical processes. Sum rules for linear and nonlinear optical constants are also presented.
Experimental investigations and theoretical studies of spectra of molecular scattering of light arising from the temporal changes of optical inhomogeneities induced by pressure, entropy, concentration and anisotropy fluctuations are dealt with in the next chapter.
Chapter four reviews the field of fiber-optical soliton communication systems and includes the following topics: periodic amplification, timing jitter and its control, time-division multiplexing, dispersion management, wavelength-division multiplexing, polarization-division multiplexing, and dark solitons.
Chapter five focusses on theoretical aspects of the local field electrodynamics in mesoscopic media. These media are of particular importance because the so-called quantum size effects link the local field theory of bulk media to self-field (Lamb shift) and radiation-reaction (spontaneous emission) effects in atoms and molecules.
The final chapter reviews recent experiments and theories concerning the time it takes for a photon or an electromagnetic wave packet to tunnel across a barrier. Two controversial questions about the tunneling time are examined: the first concerns conflicting theoretical predictions of this time, and the second concerns the question whether the observed superluminal group velocities in tunneling of single-photon wave packets, femtosecond laser pulses and microwave pulses violate causality.

Revue Générale de Thermique

UN VÉRITABLE TRAIT D'UNION ENTRE LA RECHERCHE FONDAMENTALE ET LA THERMIQUE INDUSTRIELLE

A FORUM BETWEEN FUNDAMENTAL RESEARCH AND INDUSTRIAL TECHNIQUES IN ALL THERMAL FIELDS

- **Transferts de chaleur et de masse, applications à l'ingénierie** *Heat and mass transfer processes, and their applications to engineering problems*
- **Systèmes thermiques** / *Thermodynamic systems and energetic processes*
- **Environnement...** / *environment...*

La *Revue Générale de Thermique* est une revue internationale à comité de lecture, consacrée à la physique des transferts en général et des transferts thermiques en particulier.
Elle publie des études fondamentales et des recherches finalisées en français et en anglais, sous forme d'articles primaires, d'articles de synthèse et de courtes notes.

The Revue Générale de Thermique *is an international journal devoted to the publication of fundamental studies, applied research and short notes on the physics of transfer processes in general with emphasis on thermal aspects. It publishes in English and in French. All articles are reviewed by a peer-review.*

Electronic manuscripts: Electronic manuscripts have the advantage that there is no need for the rekeying of text, thereby avoiding the possibility of introducing errors and resulting in reliable and fast publication.

Your disk plus three, final and exactly matching printed versions should be submitted together. Double density (DD) or high density (HD) diskettes ($3^1/2$ or $5^1/4$ inch) are acceptable. It is important that the file saved is in the native format of the wordprocessor program used. Label the disk with the name of the computer and wordprocessing package used, your name, and the name of the file on the disk. Further information may be obtained from the Publisher.

Authors in Japan please note: Upon request, Elsevier Science Japan will provide authors with a list of people who can check and improve the English of their paper (*before submission*). Please contact our Tokyo office: Elsevier Science Japan, 1-9-15 Higashi-Azabu, Minato-ku, Tokyo 106; Tel. (03)-5561-5032; Fax (03)-5561-5045.

Chemical Physics Letters has no page charges.

For a full and complete Instructions to Authors, please refer to *Chemical Physics Letters*, Vol. 282, No. 5,6, pp. 473–474. The instructions can also be found on the World Wide Web: access under http://www.elsevier.nl or http://www.elsevier.com.
